

Recent Zone Activities

Weathered Out Again 16 January

The weather went bad for the trip to Brandon very early on Sunday, and the ex was changed to local flying. Ten participants arrived at the Training Centre at 10 am, crews were assigned, and targets were dispatched. The target crew set an ELT near Dugald, and then

were supposed to head to a point near Beausejour to simulate a lost vehicle. In the meantime, before either of the two aircraft could launch, the weather forecast for 3 pm arrived, and visibility dropped to less than two miles. The target crew redirected themselves to a Garson café to wait for further instructions. When the poor vis proved itself to be generalised, the ex was called off, and a fairly enthusiastic clean up of the storage room took place.

Navigator Operational Training Session 11 January

Nineteen members attended a navigation refresher on 11 January. Bill Hilash reviewed the Canadian Search Area Definition, and then all participants got to try their hands at drawing one on a VNC.

Tom Park and Doug Brugger work on their chart. Photo by Randy Wall.

Name Tapes for Flying Suits

Jerry Roehr will place another order for name tapes. If you like to receive a name tape, please e-mail Jerry at roehr@mymts.net stating the preferred spelling of your name and the number of tapes you would like to order. The very first tape is free and subsequent tapes are \$4.50 each. Jerry can also be reached by phone after January 28, 2011 at 981-4239.

ELT Air and Ground Search 28 December

On December 28th, at about 2:30 pm, we received a call from Trenton Joint Rescue Coordination Centre (JRCC) that there was a ELT reported near Lac du Bonnet. By 3:40 Jim Bell had assembled a crew of pilot Bill Karras, navigator Mark Webster, and spotters Patrick Buat, and Moe Shpak.

The briefing indicated that an ELT was detected by St Andrews Tower in the early afternoon. The signal was audible for several minutes and several high flying aircraft had reported the signal since then. The location seemed to be near Lac du Bonnet, JRCC requested that we launch an aircraft to fly towards Lac du Bonnet to find the source. If no signal was detected, we were to proceed to Lac du Bonnet airport and carry out an expanding square search until the signal was found. The weather was good, the crew trained and current, the paperwork done, the aircraft was warm, and we were ready to go.

As luck would have it however, the battery was not up to the job of starting us. As I contacted JRCC to tell them of a slight delay, the controller let me know that the ELT was on the move and he thought it was one of 4 aircraft currently in the circuit at St Andrews. We were asked to turn our homer on and look up. (This was a first for me, the search aircraft on the ground, looking up to see if the target was flying overhead. I don't think we've ever had that training scenario!) No luck. Harv's Air had us jumped in a few moments and we launched with hardly a delay.

We exited the circuit and picked up the ELT signal immediately.

Unfortunately it was very weak, and we were unable to home on it. We then received an update that an aircraft had received a strong signal near Scanterbury. We proceeded in that direction, but the weak signal had simply vanished. We headed back to Bird's Hill park and tried to home on the original signal. It seemed to bounce from everywhere and at Mark's suggestion I climbed the aircraft, eventually to 4,000'. We received an update that an airliner had a strong signal 5 miles south of Winnipeg airport. We certainly had divergent fixes.

By now, JRCC tasked a Hercules to assist. The Hercules departed Winnipeg to join the search and they headed to 10,000' to begin listening.

We headed south to a failing signal and now our receivers began to disagree. After discussion, we minimised the interference from the receivers. We had Patrick monitor aural intensity from the back seat using a handheld radio, and Mark would report direction and signal intensity from the front. The highest intensity location was still near Bird's Hill Park so we descended 1.000' to see if we could get a signal to home on. We were able isolate the signal near Garven Road and Highway 59 and dispatched Jerry and Jim to search from the ground.

We were able to isolate the signal further and attempted to update them with limited success. We reached bingo fuel and recovered to St Andrews, as the snow began to fall. We remained at St Andrews in case another flight was necessary.

The ground team continued the search. While travelling south on Highway 59, they picked up the **ELT signal at Coronation Road.** The signal got quite strong, and then rapidly faded, and was lost before the vehicle reached Garven Road. No signal was found at the location identified by the aircrew, so the ground team returned to Highway 59. The signal was regained, but indications on the ELT homer were inconclusive. The homer seemed to show that the signal was coming from west of the floodway.

The signal was strong, but there was still no obvious source. The ground team knocked on the door of a nearby house, and asked the occupant whether there were any airplanes or airfields in the area. He indicated that there were two: one to the north and one to the south.

The signal led the ground team northwards and was identified as originating from a hangar. Initially no one answered the door, and the hangar was locked. However, another attempt brought the owner to the door, and he opened the hangar. The ground team confirmed that the signal was coming from the airplane, and the owner turned off the ELT. During this time, the Hercules made several passes over the house, obviously having identified this location as well.

We determined the cause of the weak and attenuated signal: the hangar had steel walls and roof, and had several coils of electrical wire stored along the wall, shielding it from the outside world. The signal was difficult to track on

the ground from more than a couple of hundred metres.

I am consistently impressed with the level of training and professionalism from our CASARA crews. It was a team effort to safely locate and extinguish this signal. Mark, Patrick, and Moe displayed excellent skills and cockpit resource management throughout the flight. I had no doubts that Jerry and Jim would find the source, once we could get

them in range. Many thanks to all those who assisted.

Also, thanks to John Hall for making his aircraft available for use to CASARA.

CASARA Participation Schedule

The Participation Schedule consists of three sheets: Scheduling, Currency, and Availability. All information on the Availability sheet is now repeated on the Scheduling sheet, surrounded by tildes.

Members use the form as follows:

- enter your availability information on the on line form. Insert your CMS number, if known. You don't
 have to fill in availability for every exercise. The information you enter will appear on the Scheduling
 sheet, surrounded by tildes;
- no later than seven days before the exercise, your chief will designate those who will fly as spotters, navs, or pilots. Check the Scheduling sheet to see if you've been selected. Those selected will have the role identified on a coloured background;
- no later than four days before the exercise, the co-ordinator will select targets and headquarters staff, and put that information on the Scheduling sheet. You should also be advised by email or phone.

The Currency sheet is now part of the participation schedule spreadsheet. It contains the same information as the currency page in the newsletter, but will be kept up to date. You can see your last ground training, flights, and search patterns, as well as the date your currency elapses.

Currency For Searches and the Currency Table

In order to fly on searches, you must be certified and current for the position in which you will fly. You are certified by the zone commander upon completion of the process required to achieve wings standard for each position. If you have been awarded spotter wings, for example, you are certified as a spotter.

Once you are certified, you must maintain currency by meeting the minimum requirements listed below, within the last 365 days:

Role	Academic Training	Number of Flights	Search Patterns	ELTs
Spotter	3 hours of Spotter specific classroom training	2 flights of not less than 1 hour each	No requirement	No requirement
Navigator	4 hours of Navigator specific classroom training	4 flights of not less than 1 hour each	4 search patterns appropriate to the area of operation (track crawl, CLA, sector, expanding square)	3 ELT homings of which 1 must be an aural null
Pilot	3 hours of Pilot specific classroom training	6 flights of not less than 1 hour each, with a minimum of 24 flying hours PIC	4 search patterns appropriate to the area of operation (track crawl, CLA, sector, expanding square)	3 ELT homings of which 1 must be an aural null

Coming Events

Meet at the Training Centre unless noted. Exercise end times are *estimates*. Changes are highlighted in yellow. Remember to check the recorded message at 338-7185 before coming out for an exercise.

Changes are inglinging	d in yenow.		Janua	rv.
